NURSE VIEW

The challenges facing care in hospitals and residential centres require increasingly optimized and efficient processes. The adoption of technological solutions by these centres helps to organize the daily workflows of care professionals, allowing an improvement in time and in the quality of care for their patients.

In order to help our clients offer advanced services, Neat is committed to developing assistive technology that enables better care of patients and residents. Our Assisted Living solutions suit all kind of residential facilities.
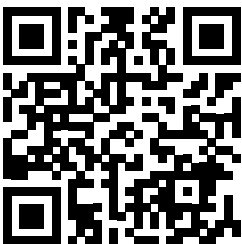

What is NURSE VIEW?

NURSE VIEW is an advanced web interface developed by Neat within the D-SERVER/ALMA solution that enables intuitive presentation of alarms on large screens. Each alarm type can be configured individually in any color with desired sound effect. With the filter function, you can easily configure so that only alarms from floor 1 are displayed on the screen located on floor 1. There is no limit to the number of user accounts you can create with different individual customizations.

Part of NURSE VIEW is MAP VIEW which allows you to display alarms on interactive maps. It is easy to upload a map and draw and associate an area to a user, alarm point, personnel or position. MAP VIEW has no restrictions on the number of maps you can upload.

With the slideshow feature, it is easy to combine both NURSE VIEW and MAP VIEW. It is easy to configure individual slide shows for different accounts to suit your needs.
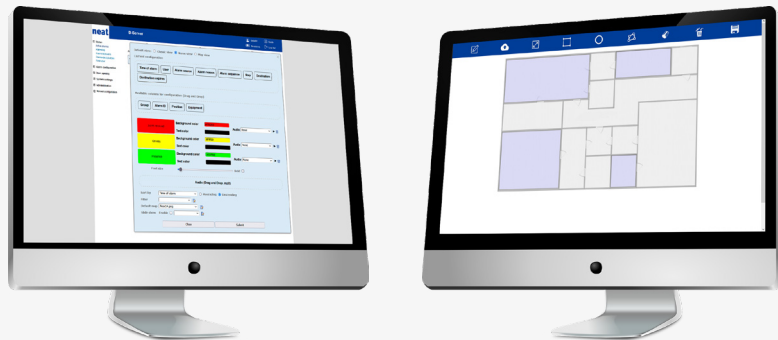

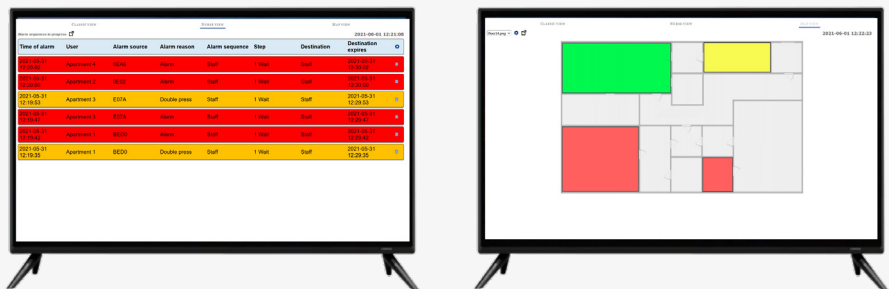

Get started in minutes with NURSE VIEW

Once the NURSE VIEW license has been uploaded (D-SERVER release 19.50 or newer required), you only need to think about how you want to present the alarms. No complicated installation or extra hardware is needed to get started.

The settings menu is user-friendly and NURSE VIEW and MAP VIEW share the same interface. After a few steps, the system is ready!

Advanced features:

- Easy to get started
- One license for unlimited screens
- Each alarm type can be configured with individual colors and sounds
- MP3 audio clips supported
- A wide range of image formats is supported by MAP VIEW
- Scalable Vector Graphics (SVG) supported
- Unlimited number of maps can be uploaded
